Z-FLEX[®] Air Silver[™]

RADIANT PROTECTION THAT BREATHES

Introducing Z-Flex Silver Air — the first and only breathable NFPA-component certified aluminized fabric for proximity suits.

Air provides game-changing improvement in breathability and durability, with all the radiant protection you've come to expect from Z-Flex Silver.

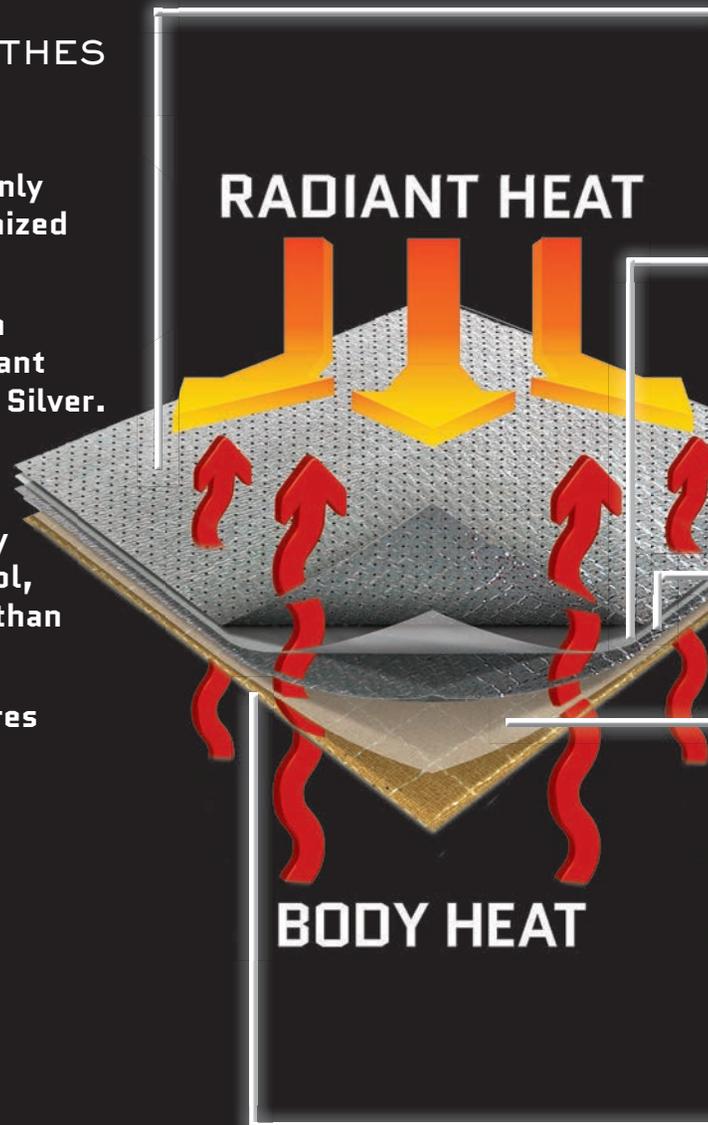

Newtex's proprietary micro-perforation process optimizes the placement, pattern and dimensions of micro-perforations to allow body heat and sweat to escape — keeping you cool, comfortable, productive and safe far longer than you ever thought possible.

The next time you have an incident that requires "Silvers," Breathe Easy.

Feel the difference. For a free sample of Z-Flex Silver Air, visit us at:

NEWTEX 

Layer 1: Z-Flex Air Aluminized
High-purity aluminum particles reflect up to 95% of infrared radiant energy from heat, flames and hot objects.

Layer 2: Hi-Temp Film
A high-temperature barrier film significantly reduces conductive heat transfer.

Layer 3: Z-Flex Air Aluminized
A secondary layer of pure aluminum particles increases the effectiveness of the outer layer, while providing added radiant reflectivity.

Layer 4: Advanced Adhesive Layer
An advanced thermoset polymer system delivers superior thermal performance over traditional rubber-based adhesives.

Layer 5: 3D Mock Knit
PBI fibers reinforced with a para-aramid ripstop provide the comfort of a knit with the strength and insulation of a woven fabric.
